

Life Bridge Christian Church – Monroe, GA

PROGRAM REQUIREMENT

After outgrowing their old facility, Life Bridge Christian Church in Georgia chose modular construction as a solution to their expanding membership. The church needed enough space to fit their 150+ growing membership, but wanted the space to look and feel like a permanent facility. They also needed a wide open sanctuary to accommodate their special lighting and sound equipment, a separate foyer entrance to provide easy flow into the sanctuary, and nursery and classrooms to be placed away from the sanctuary to minimize disruptions during services.

DESIGN SOLUTION

Modular Construction was more affordable and efficient than conventional construction for this project. The space the customer needed along with all the extras they desired were provided in a short timeframe with a significant cost savings.

BUILDING FEATURES
